<td>Purified Water &amp; Oxygen</td>
<td>Oxidizing Agent</td>
</tr>
<tr>
<td>Polyquaternium</td>
<td>Plant Cellulose</td>
<td>Conditioning Agent</td>
</tr>
<tr>
<td>EDTA Tetrasodium</td>
<td>Food Antioxidant</td>
<td>Stabalizer</td>
</tr>
<tr>
<td>Pheoxethanol Potassium Sorbate</td>
<td>Vitamin E</td>
<td>Preservative</td>
</tr>
<tr>
<td>Etdronic Acid</td>
<td>Mineral</td>
<td>pH Adjuster</td>
</tr>
</tbody>
</table>

## Notes

1. Organic Color Systems contains no ammonia, formaldehyde, propylene glycol, or resorcinol and is the most natural and organic permanent hair color available worldwide.
2. Organic Color Systems’ activators contain only pharmaceutical grade hydrogen peroxide, which is the same peroxide used in eye drops.
3. Some of Organic Color Systems include mineral pigments. If mineral pigments are included in the color, only the smallest amounts (an average of 00.006) are used. Organic Color Systems employs only the purest and most natural virgin minerals available including HC Yellow 2, HC Red 3, 4-Chlororesorcinol, 2–Amino–4–Hydroxyethylamino–Anisole, 4–Amino–Hydroxytoluene, M–Aminophenol, 2–Methly Resorcinol, Phenylenediamine, P–Aminophenol.
4. Chlororesorcinol and Methyl Resorcinol is a different compound than Resorcinol (which is highly toxic). Resorcinol is not used in any Organic Color Systems products.
5. Monoethanolamine and Ethanolamine are coconut derived organic chemical compounds, which are far less corrosive than ammonia or ammonia hydroxide and are used at levels below 00.004 in Organic Color Systems.
6. Organic Color Systems’ pH is 9 and Naturlite’s pH is 10 while ammoniated color and bleach lighteners have a pH of 11.5.
